

UNNA Boot Wear & Care

An Unna boot is a medicated gauze wrap for leg ulcers and rashes.

For the best results:

1. Once the Unna boot is applied, stay off of your feet as much as possible and when sitting elevate legs.
2. Do not get the Unna boot wet.
3. Shower or tub bath if able to keep boot dry. You may use a plastic bag over the boot.

PLEASE INFORM US IF YOU EXPERIENCE ANY OF THE FOLLOWING:

- Severe itching and rash above or below the Unna boot
- Coldness, numbness or tingling in the legs
- Change in color or inability to move toes
- Pain and cramping in the leg
- Foul smelling drainage
